Introduction

What is LegalEase?

LegalEase is a web-based application that empowers everyday users to generate structured legal document drafts — without needing prior legal knowledge or professional assistance for the initial draft.

Purpose & Value

- Simplifies the process of preparing legal document drafts
- Collects user inputs through guided forms and auto-generates formatted documents
- Saves time for students, small businesses, and individuals
- **Note:** All generated drafts should be reviewed by a qualified legal professional before use

Problem Statement

Complex Structure

Legal documents follow strict formats and specific legal terminology that beginners find difficult to understand and replicate correctly.

Knowledge Gap

Most users are unaware of the required clauses, wording, and structure needed for different types of legal documents.

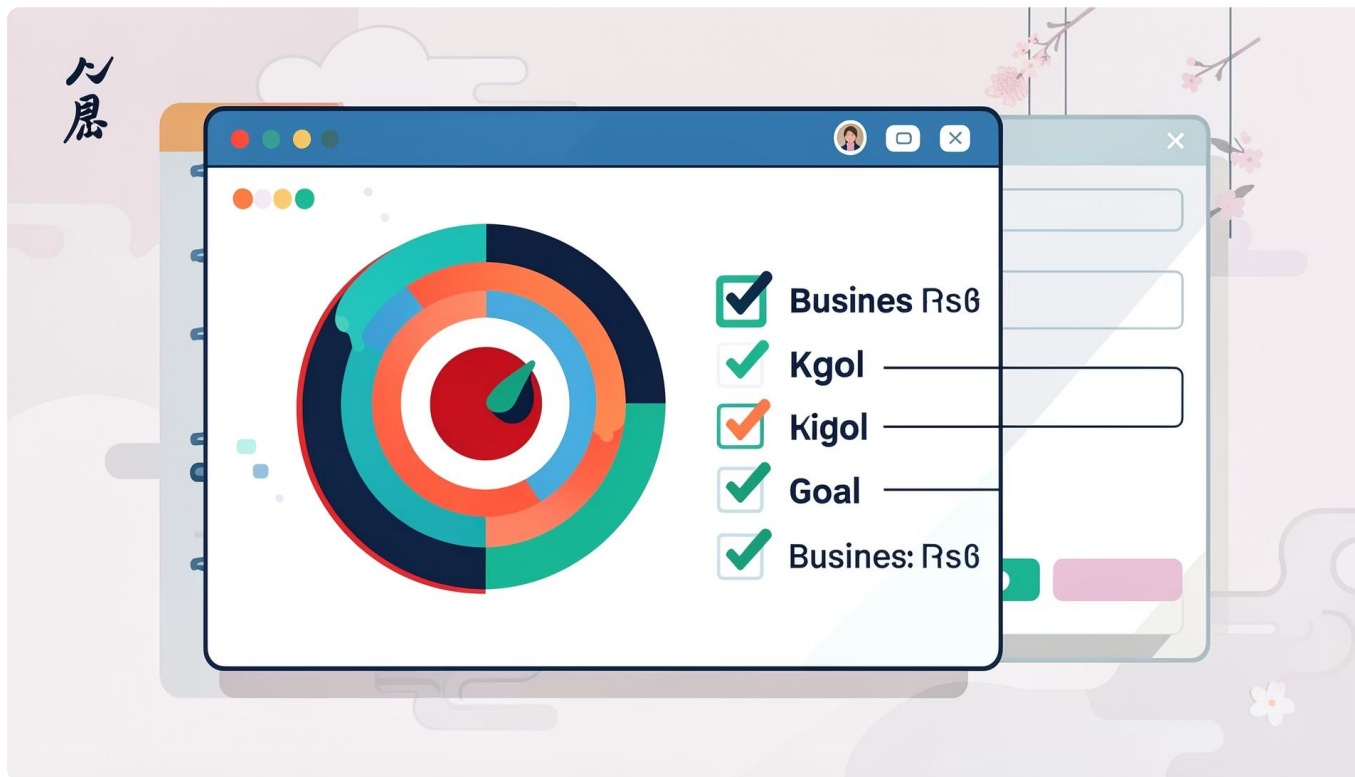

Time-Consuming Process

Manual drafting or seeking professional help for basic documents is slow, expensive, and often inaccessible for common users.

No Simple Digital Tool

There is a clear need for a simple, guided digital interface that helps users generate basic legal drafts without legal expertise.

Objectives

1 User-Friendly Interface

Provide a clean, intuitive interface accessible to users with no legal background.

2 Guided Form Collection

Collect all required details through structured, easy-to-fill digital forms.

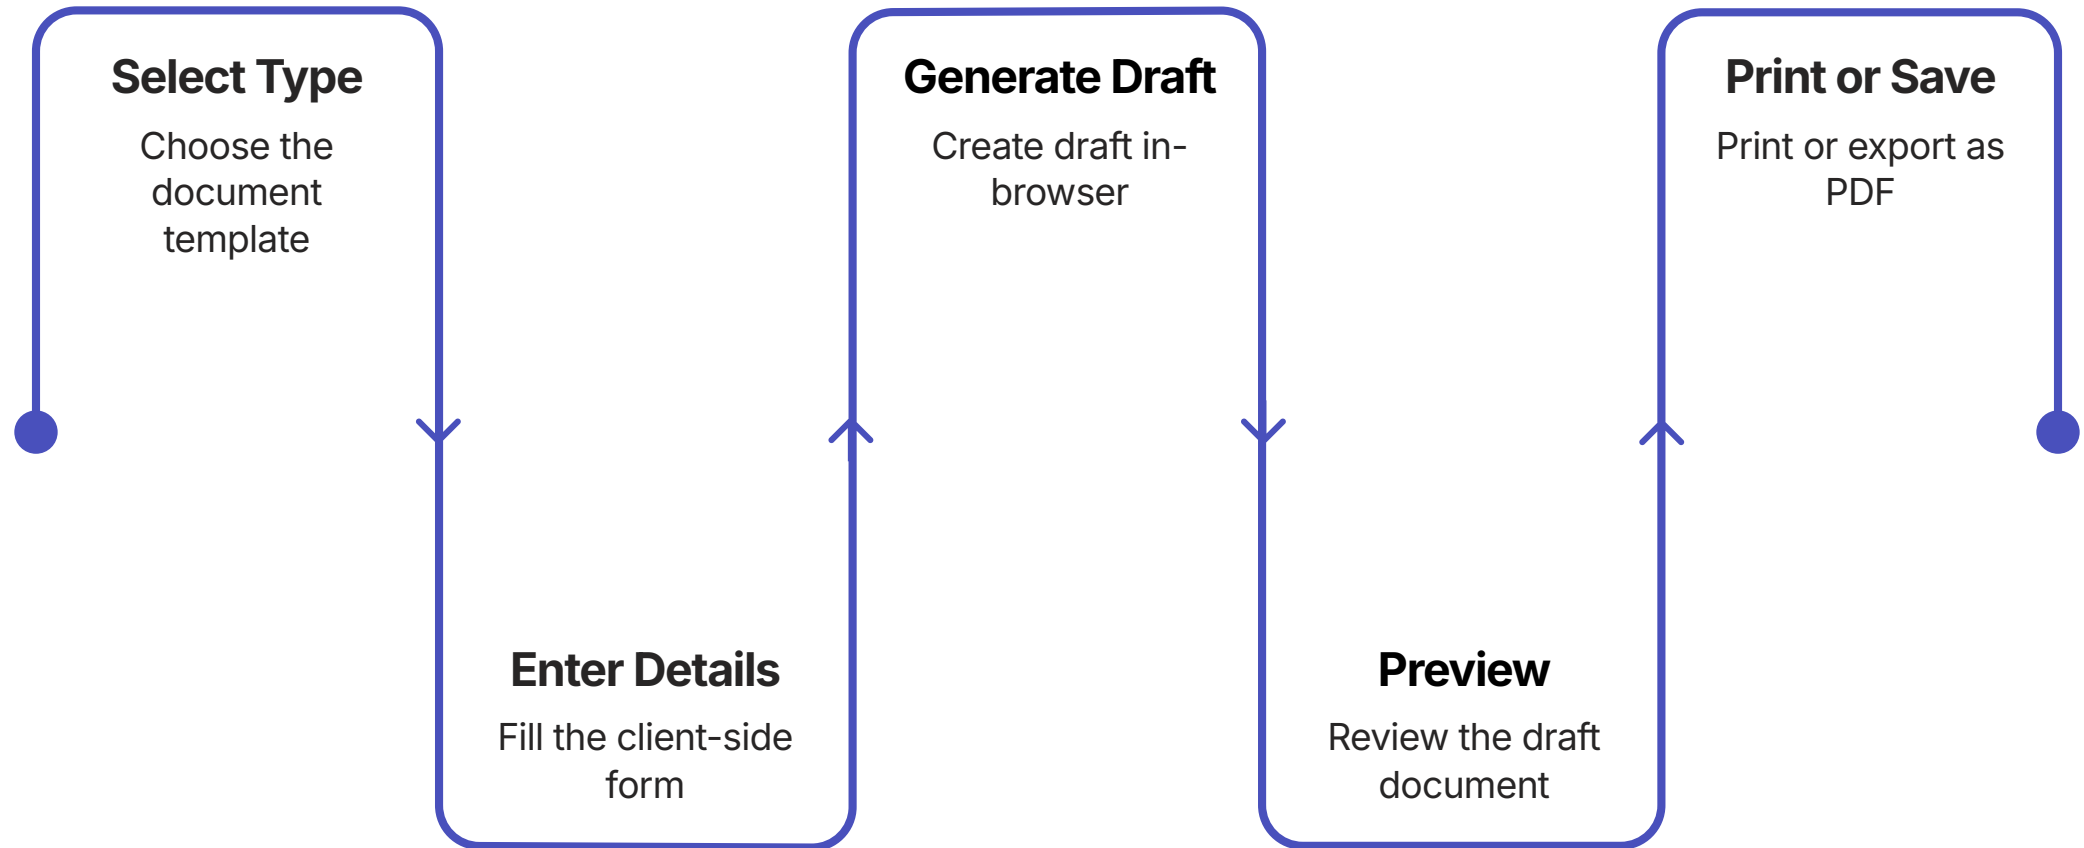

3 Structured Draft Generation

Automatically generate well-formatted legal document drafts from user inputs.

4 Multi-Document Support & Export

Support multiple document types and allow users to print or save drafts as PDF.

Proposed System — Workflow

The entire process is handled client-side using HTML, CSS, and JavaScript — no backend server required, making it lightweight and easy to deploy.

Key Features

Document Type Selection

Choose from multiple supported legal document types via a simple dropdown.

Auto Draft Generation

Instantly generate a formatted legal draft from the entered inputs.

Clear & Reset

Easily reset all form fields to start a new document without refreshing the page.

Guided Form Input

Enter party details, purpose, and other required information through structured forms.

Preview & Export

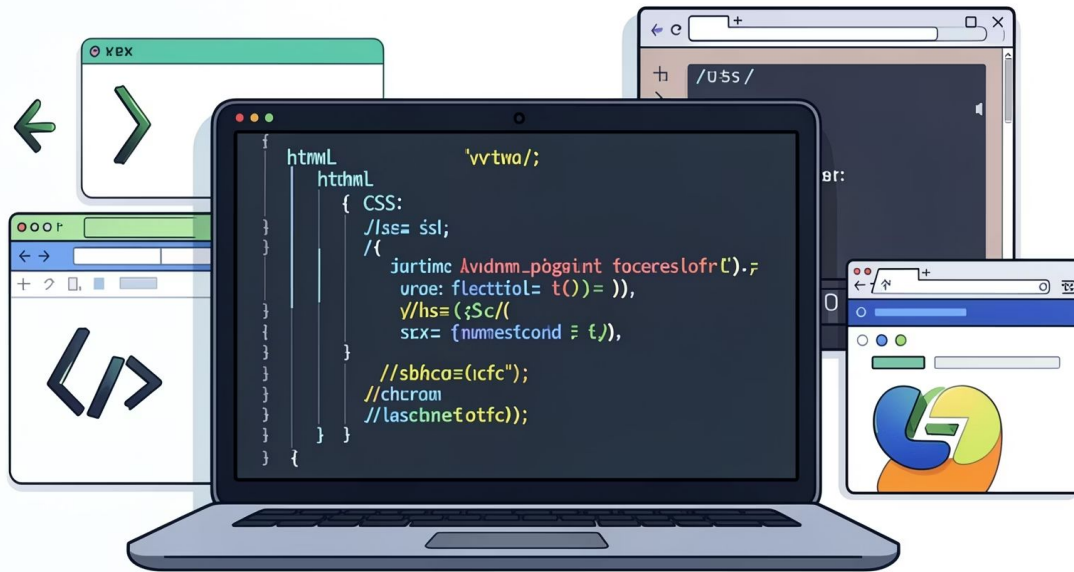

Preview the generated document and print it or save it as a PDF in one click.

Fully Responsive

Works seamlessly on both mobile devices and desktop browsers.

Technologies Used

HTML5

Provides the structural foundation — forms, inputs, and document layout.

CSS3

Handles visual design, responsive layout, and mobile-friendly styling.

JavaScript

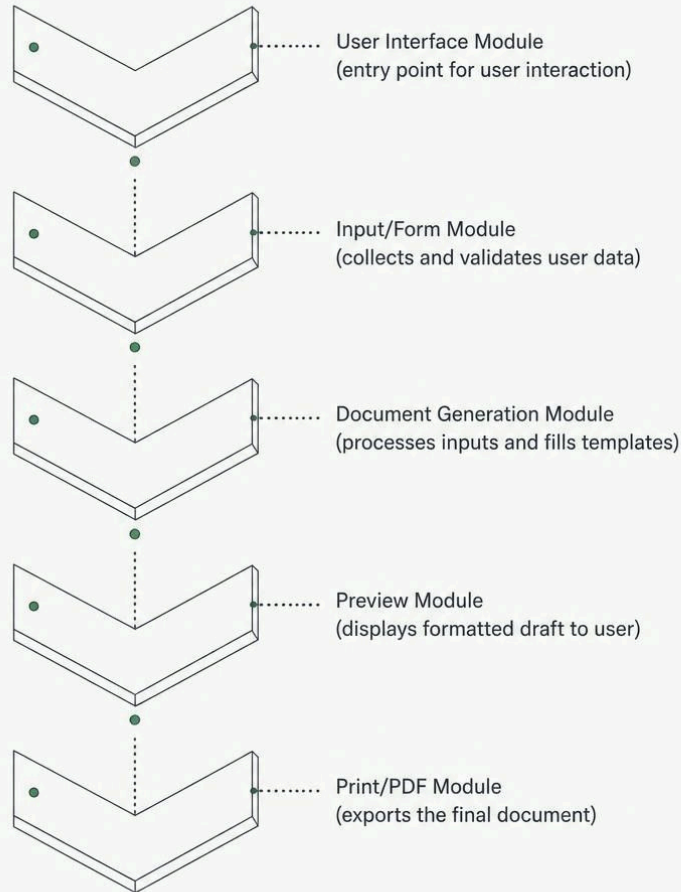

Powers form handling, template logic, and dynamic document generation.

GitHub

Used for source code hosting, version control, and project sharing.

System Architecture & Modules

How the Modules Interact

- **UI Module** — Entry point; renders document type selector and navigation
- **Form Module** — Captures and validates all user-entered party and purpose details
- **Generation Module** — Merges validated inputs into pre-built legal templates
- **Preview Module** — Renders the filled template in a readable, formatted view
- **Print/PDF Module** — Triggers the browser's native print dialog for PDF export

Sample Output & Benefits

Rental Agreement

Landlord-tenant agreement with property details and terms.

Leave Letter

Formal leave application for employees or students.

Affidavit & NDA

Sworn statements and Non-Disclosure Agreements for basic use.

Complaint & Undertaking

Formal complaint letters and undertaking declarations.

❏ LegalEase is an educational prototype. All generated drafts must be reviewed by a qualified legal professional before actual use.

Conclusion & Future Scope

Summary

LegalEase successfully demonstrates a simple, client-side web solution for generating structured legal document drafts — making basic legal writing accessible, fast, and educational for everyday users.

Future Enhancements

- Real AI / LLM integration for smarter, context-aware drafting
- Expanded template library with more document types
- Multilingual support for regional languages
- User accounts with document history and cloud storage
- Stronger form validation and legal clause suggestions

Thank You
